

## Where can I find information about contaminated sites on the DEQ Web?

The Remediation and Redevelopment Division (RRD) maintains a Web site with links to several different lists and databases relating to contaminated sites in Michigan. The easiest way to find this information is at [www.michigan.gov/deqrrd](http://www.michigan.gov/deqrrd). Scroll down the center of the page to the heading "Contaminated Sites Lists" where you can access several links and databases including:

- \* Part 201 Sites List
- \* Part 213 Sites
- \* Superfund Sites
- \* Clean Michigan Initiative (CMI) Projects
- \* State-Owned Sites

The Part 201, 213, and CMI links will allow the user to search for contaminated site information using fields such as pollutant, source, county, site name and address, etc. The Superfund and State Owned Sites links provide basic project information such as site name and location, current status, funding, project manager, etc.

If you have any problems accessing information from these links or have additional questions concerning contaminated sites, please contact the Environmental Assistance Center at 800-662-9278.
